AccuSpeechMobile™
Data Sheet

AccuSpeechMobile Voice Automation

Speech to Productivity

Product Highlights

Modern Speech Recognition Engine
Speaker-independent voice engine designed to work in noisy environments with outstanding accuracy.

Device-Based, Not Server-Based
100% device-based solution; no changes to your core application and no server or middlware is needed.

Mobile Device Agnostic
You select the mobile devices that meet your business requirements. Add voice to mobile devices already deployed in the DC, or take advantage of the increased productivity and accuracy benefits that voice automation delivers, to help cost-justify the move to newer mobile devices.
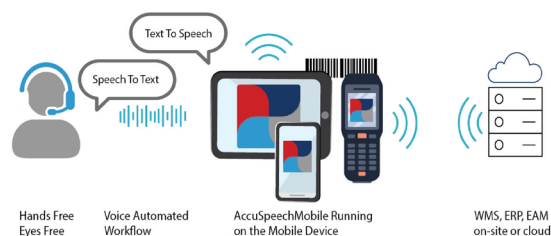

Automated Workflow
Guide workers through complex standard operating procedures with voice automated workflow which integrates voice input and text to speech with scanning and keystroke sequence automation. Incorporate RPA to remove repetitive workflow sequences and increase accuracy.

Agile Development and Deployment
Workflows are developed and deployed on the mobile device and act as an abstraction layer to your backend application. No costly or complex server changes. Rapid prototyping and staged deployment support flexible and non-disruptive implementation.

Automate Workflows with Speech-to-Text and Text-to-Speech

| Hands Free Eyes Free | Voice Automated Workflow | AccuSpeechMobile Running on the Mobile Device | WMS, ERP, EAM on-site or cloud |

Mobile Devices Supported

- Use the Mobile Devices of Your Choice

Distribution Center Workflows

Rapid ROI, Lower TCO

Double-digit improvements in productivity are comon after deploying AccuSpeechMobile and organizations typically see ROI on AccuSpeechMobile software in less than 10 months. Workflows are simplified and more efficient, while errors are reduced. Accuracy improvement to 99.9% is common. The ramp-to-rate for new and seasonal staff is also reduced by ~50%.

Maximize What You Already Own

Voice automation from AccuSpeechMobile delivers a Hands-Free, Eyes-Free solution to improve workflows in the DC. It is an ideal solution if you want to improve productivity, reduce errors, enhance safety, reduce ramp-to-rate for new staff, see tangible improvements in a very short timeframe (typically 6 weeks) and realize an ROI of less than a year.

Voice Automate Many Workflows

- Picking
- Packing
- Cycle-Count
- Put-Away
- Shipping
- Receiving
- And Many More...

Most clients Voice Automate 5-15 workflows.

"It's a great component for us because you're not incurring fees and charges over and over again for the same development you've already put in play."

Tom Addis, Director of Logistics
